DIRECT, ACTIVE AND DYNAMIC SURFING IS THE NEW SITTING

UN2304-1
Standard version

UN2304-1
High version

Surfing instead of sitting : The new SURF brings a breath of fresh air to the work place. SURF activates like hardly any other chair. A firm sit in the saddle transmits each movement directly to the stool which absorbs it and gives it back dynamically. Playfully and easily the whole body comes in motion.

As it is with surfing, SURF activates many muscle groups at the same time. The SURF constantly changes the body between tension and relaxation . This is fun, refreshes and trains the sense of balance for a healthy posture.

On its 5 wheels SURF is always where you want it to be – for long concentrated work as well as for quick meetings and inspiring teamwork.

SURF

MOVES WHILE SITTING
AND KEEPS YOU FIT

STIMULATING ERGONOMICALLY THE FUN OF MOVEMENT COMES WITH SITTING

The integrated ERGO BALANCE 3D technology makes sitting mobile and keeps muscles, intervertebral discs, tendons and joints fit.

It is back-active.

The dynamic gas spring stimulates for bouncing: this provokes and increases blood circulation.

The saddle seat assists the fun of movement and an active posture with a lot of body tension. In this way, the muscles are strengthened and the spine is relieved.

Seat height adjustment:

The sitting height is infinitely adjustable by the gas spring height adjustment. It springs softly and dynamically and invites for bouncing.

Sliding seat:

The saddle can be moved horizontally at three positions. The centre of gravity above the gas spring and the individual sitting feeling changes noticeably.

ERGO BALANCE technology under the saddle:

The ERGO BALANCE movement element is integrated close to the body directly in the seat and is 360° mobile. Therefore, the saddle already reacts even to small pelvic movements . This mobilizes the back muscles, improves the fluid supply to the inter-vertebral discs and increases the blood circulation.

Large radius of movement with a secure sitting feeling:

Close to the ground in the base is the second ERGO BALANCE motion element visibly integrated – for a large operating radius. The entire body is kept in motion. Bending over to the desk, the back remains straight just by it self.

GECCO Design VISION

SURF is a completely new development, which worked out with the designer Henner Jahns, managing director of Gecco Vision design office in Los Angeles.

GIRA

Sit and stand range, providing users have a continuous healthy posture during work movements.
